Contents

1	About this book	1
1.1	Load Packages	1
1.2	Introduction	1
2	Chapter 1: Renaming Raw Images	1
3	Chapter 2: Selecting Region of Interest	2
4	Chapter 3: Classifying Image Attributes with VIA	2

1 About this book

This book was authored to serve as a basic guide for using the data pipeline to process raw images using ROI software, VIA image annotation, and a machine learning model.

Special thanks to Audrey Thellman and Wes Slaughter for their guidance and mentorship.

1.1 Load Packages

```
library(bookdown)
# Knits markdown files into a book
library(reticulate)
# Allows python code to be ran in an R environment
```

1.2 Introduction

2 Chapter 1: Renaming Raw Images

This chapter provides an overview about the Python scripts used to give descriptive file names to raw images.

3 Chapter 2: Selecting Region of Interest

Text here

4 Chapter 3: Classifying Image Attributes with VIA
